

Assignment 7 PHP and MySQL Admin

Implement the login and logout web application to handle the session management using session and cookies. (PHP)

PHP Cookies

- A cookie is often used to identify a user. A cookie is a small file that the server embeds on the user's computer.
- Each time the same computer requests a page with a browser, it will send the cookie too.
- With PHP, you can both create and retrieve cookie values.

Create Cookies With PHP

A cookie is created with the **setcookie()** function.

Syntax:

setcookie(name, value, expire, path, domain, secure, httponly);

Only the *name* parameter is required. All other parameters are optional.

Install Xampp server and open xampp control panel then start apache and Mysql

XAMPP Control Panel v3.3.0 [Compiled: Apr 6th 2021]

XAMPP Control Panel v3.3.0

Service	Module	PID(s)	Port(s)	Actions
<input type="checkbox"/>	Apache	7004 1468	80, 443	Stop Admin Config Logs

Apache/2.4.54 (Win64) OpenSSL/1.1.1p PHP/7.4.33 Server at localhost Port 80

Now, go to your browser and type localhost in the address bar, and then on the XAMPP dashboard, click on the phpmyadmin tab.

Welcome to XAMPP for Windows 7.4.33

You have successfully installed XAMPP on this system! Now you can start using Apache, MariaDB, PHP and other services. You can find more info in the [FAQs](#) section or check the [HOW-TO Guides](#) for getting started with PHP applications.

XAMPP is meant only for development purposes. It has certain configuration settings that make it easy to develop, but it is insecure if you want to have your installation accessible to others.

Start the XAMPP Control Panel to check the server status.

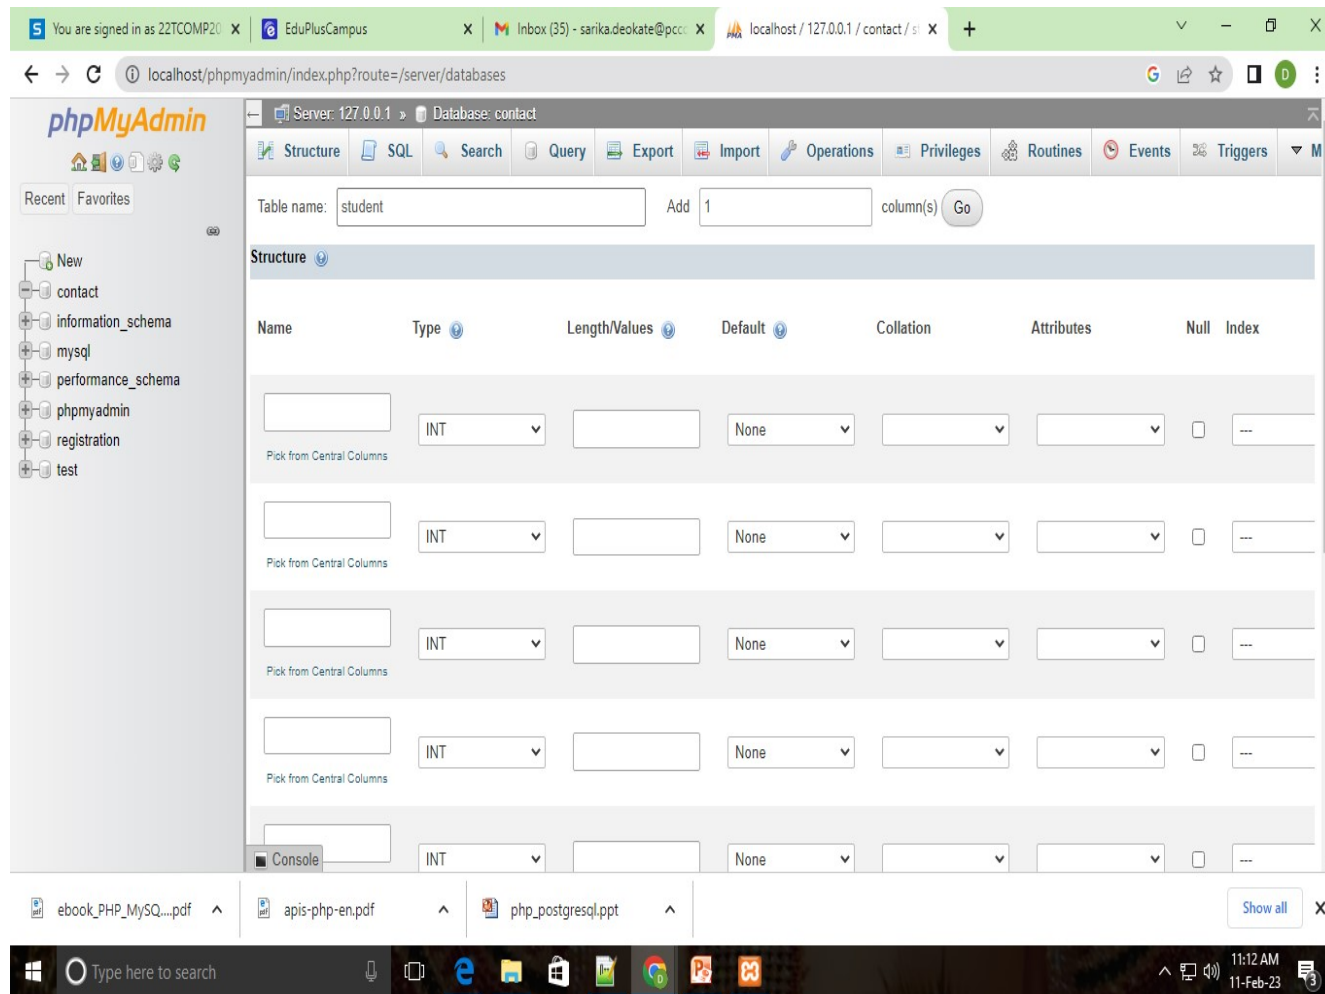

Community

Into the phpmyadmin section, click on new to create a new database.

The screenshot shows the phpMyAdmin web interface. The browser's address bar displays `localhost/phpmyadmin/index.php?route=/server/databases`. The interface includes a top navigation bar with tabs for Databases, SQL, Status, User accounts, Export, Import, and Settings. On the left, a sidebar lists recent and favorite databases, with a 'New' button at the top. The main content area, titled 'Databases', features a 'Create database' button, a text input field containing 'contact', a collation dropdown menu set to 'utf8mb4_general_ci', and a 'Create' button. Below this, there are checkboxes for 'Check all' and a 'Drop' button. A table lists existing databases with their collations and actions.

	Database	Collation	Action
<input type="checkbox"/>	information_schema	utf8_general_ci	Check privileges
<input type="checkbox"/>	mysql	utf8mb4_general_ci	Check privileges
<input type="checkbox"/>	performance_schema	utf8_general_ci	Check privileges
<input type="checkbox"/>	phpmyadmin	utf8_bin	Check privileges
<input type="checkbox"/>	registration	utf8mb4_general_ci	Check privileges
<input type="checkbox"/>	test	latin1_swedish_ci	Check privileges

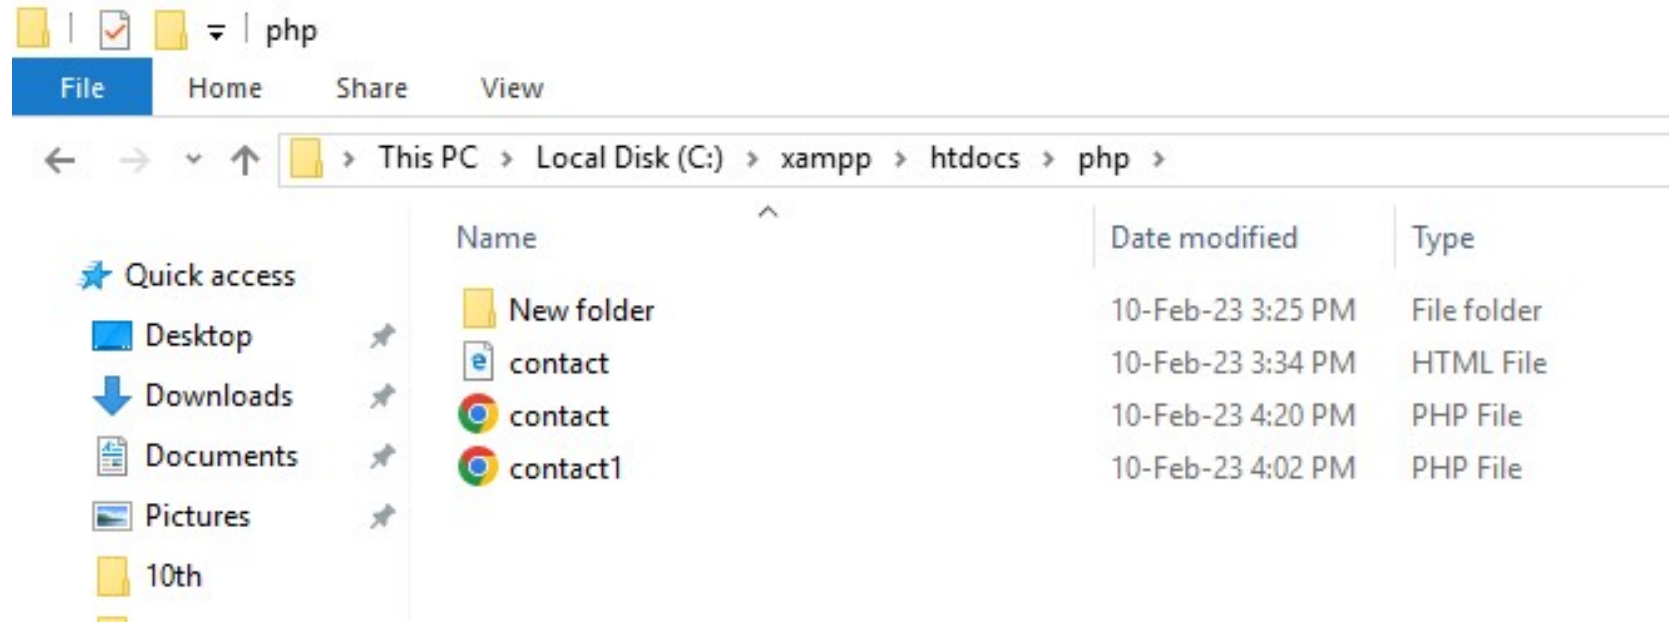

Now, create a table named “student(any name as per your requirement)” and create 5 columns as shown below, which you will use on the registration page.

Keep the “id” column as Auto Incremented by clicking the check box next to ‘AI’ since it will be the primary key.

Once database table is ready prepare your .php and .html file in any editor. Put those file in following folder

C:/xampp/htdocs/create_a_new_folder_to_keep_your_files
Here I have created a PHP folder

Then again to go the localhost and click on PHP folder

Apache/2.4.54 (Win64) OpenSSL/1.1.1p PHP/7.4.33 Server at localhost Port 80

Enter the data and click submit button

The screenshot shows a web browser window with the following tabs: "You are signed in as 22TCOMP20", "EduPlusCampus", "Inbox (35) - sarika.deokate@pccc", and "Contact Form - PHP/MySQL Dem :". The address bar displays "localhost/php/contact.html". The page content is titled "Contact Form" and contains four input fields: "fname" with the value "priyanka", "mname" with the value "abc", "lname" with the value "patil", and "pwd" with the value "dfgdg". A "Submit" button is located at the bottom left of the form.

Fetches data successfully

← Record are retrieved from the table

Click on table:registration

The screenshot shows the phpMyAdmin interface. The browser address bar displays the URL: `localhost/phpmyadmin/index.php?route=/sql&db=registration&table=registration`. The breadcrumb navigation at the top of the main content area shows: `Server: 127.0.0.1 » Database: registration » Table: registration`. A red arrow points from the text 'Click on table:registration' to the 'Table: registration' link.

The left sidebar shows the database structure tree with the following items:

- New
- contact
- information_schema
- mysql
- performance_schema
- phpmyadmin
- registration (selected)
- test

The main content area displays the table structure and data for the 'registration' table. The table structure is shown as:

```
SELECT * FROM `registration`
```

Below the SQL query, there are options for Profiling, Edit inline, Edit, Explain SQL, Create PHP code, and Refresh. The table structure is shown with columns: id, fname, mname, lname, and pwd. The table contains 2 rows of data:

	id	fname	mname	lname	pwd
<input type="checkbox"/>	19	priyanka	abc	patil	dfgdg
<input type="checkbox"/>	20	XYZ	ABC	patil	trytyu

At the bottom, there are options for Check all, With selected, Edit, Copy, Delete, and Export.
